'SALADA' TEA

Canada's Greatest Problem

The Canadian people are confronted with a gigantic problem. We say the Canadian people advisedly because, while governments, Federal, Provincial and Municipal are all struggling with it, the problem is one towards the solution of which individual citizens must make their contribution. The fact that it is a problem facing all other nations offers no consolation because it is a problem and as difficult it is in other lands only serves to make it more difficult in Canada.

The problem can be stated in two or three words,—unemployment and relief.

The unemployed man or woman wants work and the wages which work will bring to them. Fall work and wages are not provided by Government with the exception of men not lost, clothing, food and shelter.

Such necessities can, of course, only be provided by the State through the taxation of those other men and women who are employed, or still have some savings accumulated throughout the years of the past in order to make provision for their own future and old age. The only other way is for Governments to borrow money and add such borrowings to their public debts upon which interest must be paid through increased taxation, and the present sum of which is passed on as a liability for future generations to meet.

So far as municipalities with their small and limited sources of revenue, are concerned, many have reached the limit of what their taxpayers are able to pay in order to care for those who are unemployed. Further taxation simply means that more people will be unable to pay it, and, failing to do so, will lose what they still have with the result that they have less for less ten years to come.

"I suffered with rheumatism," said one man, "and I have been bedridden since 1920. I could not move arms or legs, and had to be led like a child. I could not stand, and I could not sit. I was an invalid all my life. I forced myself to fight against it, and tried to get out of bed, but I could not. Kruschen that eventually saved me, and to-day I consider it is saving me again. My condition has improved, and my limbs are gradually becoming more supple. Already I have been able to get out of bed, and assist them to expel the dissolved urticaria needles through the natural channel."

On their part, the Provinces,—and most particularly the Western Provinces,—have been hit harder than others, and the depression has been more severe than any other portion of the Dominion because of successive years of crop failures owing to the unprecedented drought conditions, and the result of the heavy debts contracted by the sale of their crops and borrowings. The Provincial share of relief expenditures and at the same time assume the share of the municipalities.

The problem is a national one, and one that most intimately concerns every Canadian as well as every Canadian interest. This must now be accepted as a fact, even though under the condition of the country's responsibility, the making of any final financial arrangement in this particular must rest with the municipalities.

That is, the actual facts of the situation override all constitutional aspects.

Agitators are on the other side of the picture. Tens of thousands of people who are "on relief" complain that the amounts allotted to them are inadequate to meet their necessities. They are instant in their demand that the allowances be substantially increased, and in their organizing to enforce their demands, and all over the country communistic agitators are playing upon their distress and worries and arousing their passions and making demands which it is manifestly impossible for the remainder of the population to meet.

Agitators also complain that the amounts allotted to them are inadequate to meet their necessities. They are instant in their demand that the allowances be substantially increased, and in their organizing to enforce their demands, and all over the country communistic agitators are playing upon their distress and worries and arousing their passions and making demands which it is manifestly impossible for the remainder of the population to meet.

Yet Canadians worthy of the name, and knowing their country's difficulties, should be grateful for what is being done in their behalf, and if there is any malady left in them they should not only be ready and willing, but also anxious to help in whatever way they can to their fellowmen and their country. These agitators demand work—not for themselves but for those who would make their dues—and when work is usually accepted as a condition of relief, they then demand that the work be done by them, then advocate refusal to work in exchange for such assistance, or even for a small fraction of it. Why? Because they are out to destroy the very institution of relief, and they declare that to ask relief recipients to render any service in return for such assistance is to make "awful" demands.

Yet Canadians worthy of the name, and knowing their country's difficulties, should be grateful for what is being done in their behalf, and if there is any malady left in them they should not only be ready and willing, but also anxious to help in whatever way they can to their fellowmen and their country. These agitators demand work—not for themselves but for those who would make their dues—and when work is usually accepted as a condition of relief, they then demand that the work be done by them, then advocate refusal to work in exchange for such assistance, or even for a small fraction of it. Why? Because they are out to destroy the very institution of relief, and they declare that to ask relief recipients to render any service in return for such assistance is to make "awful" demands.

Such is the major Canadian problem of to-day. It is one, let it be repeated, and emphasized, that virtually affects every citizen. It is their problem, and when it is solved, all others will be solved.

They will submit that the citizen who is employed, or has an income, or some reserves, should pay his taxes uncomplainingly, willingly and promptly, and that the rest of the population should do the same. They will insist that every effort to provide a little work, no matter how small or temporary, may be, for some one out of work, and thus relieve the pressure.

They will also insist that those in their demands, should endeavor to get along with as little as possible, rather than demand more. And they should show their manhood and self-respect by willingly, and at all times, rendering such service in return to their fellow citizens as can be in their power.

This is no time to "rock the boat," and any person who seeks to do so is not a true Canadian, but has an ulterior motive to serve, and may well be accused as an enemy of the country.

Children Send Donations

A Montreal child sent \$1 to the King George V silver jubilee cancer fund with a letter saying he had washed dishes for his mother to earn the money. A young girl from a New Saskatchewan drouth area sent \$1 with a letter saying: "My aint died of cancer; this is to help you find a cure."

After The Collection

"Am dere anybody in the congregation what wishes prayer for dein fath?" asked the colored minister. "Yassuh," responded Brother Jones, "we got a spesial prayer for you. An' nows mam mohng round reckled like."

"Yew well. We will join in prayer for Brother Jones—yer aifth de collection plate have been passed."

To Abolish Noise

"Silent" House Will Be Shown At London Exhibition

London is to have a "house of hush," a house so quiet that in it a person may be able to hear the prowl of a mouse, the sound of a "silence" exhibition in June at which it will be possible to see—but not to hear—the following:

A silent house, with silent lift and stairs, with soundless ventilating windows, room-quiet doors, silent motorcycles; a noiseless motorcar; silent vacuum cleaners; silent road drills; a silent factory room.

The exhibition, at the Science Museum, South Kensington, will be organized by the Anti-Noise League, of which Lord Horder is president.

HER ARMS AND LEGS IMMOVABLE

Ten Years With Rheumatism

To this woman it must have been like commencing to live a new life when she began to use her arms and legs again, after they had been useless for ten years.

"I suffered with rheumatism," said one woman, "and was never been bedridden since 1920. I could not move arms or legs, and had to be led like a child. I could not stand, and I could not sit. I was an invalid all my life. I forced myself to fight against it, and tried to get out of bed, but I could not. Kruschen that eventually saved me, and to-day I consider it is saving me again. My condition has improved, and my limbs are gradually becoming more supple. Already I have been able to get out of bed, and assist them to expel the dissolved urticaria needles through the natural channel."

On their part, the Provinces,—and most particularly the Western Provinces,—have been hit harder than others, and the depression has been more severe than any other portion of the Dominion because of successive years of crop failures owing to the unprecedented drought conditions, and the result of the heavy debts contracted by the sale of their crops and borrowings. The Provincial share of relief expenditures and at the same time assume the share of the municipalities.

The problem is a national one, and one that most intimately concerns every Canadian as well as every Canadian interest. This must now be accepted as a fact, even though under the condition of the country's responsibility, the making of any final financial arrangement in this particular must rest with the municipalities.

That is, the actual facts of the situation override all constitutional aspects.

Agitators are on the other side of the picture. Tens of thousands of people who are "on relief" complain that the amounts allotted to them are inadequate to meet their necessities. They are instant in their demand that the allowances be substantially increased, and in their organizing to enforce their demands, and all over the country communistic agitators are playing upon their distress and worries and arousing their passions and making demands which it is manifestly impossible for the remainder of the population to meet.

This is no time to "rock the boat," and any person who seeks to do so is not a true Canadian, but has an ulterior motive to serve, and may well be accused as an enemy of the country.

Gift For King George

Ruler Of Tonga Gives Ancient Turtle With History

King George is to be presented a three-hundred-year-old turtle with which Queen Victoria gave him when he was a boy.

The turtle, a four-foot-tall tortoise from the Tonga Islands, arrives in London. She is now on her way with her son, who attends an English school. In 1774 Captain Cook, famous British navigator, made a forced landing on the turtle's native island, one of the Pacific Islands of Tonga. His reception, to his surprise, was so warm that he renamed them the Friendly Islands, the name by which they have been known ever since.

The turtle, which is 100 years old, was brought to England, intended as a present for King George. He gave it as a peace offering to King Tuboo of Tonga. Queen Salote, his descendant, inherited the turtle.

Care For Indian Wards

Recent Incident Shows Canada Is Not Neglecting Them

Canada's paternalistic care of her Indian wards was shown recently when a delegation of Indians went to the dental school, snow-patched northern bush of Ontario for Joseph Mann, an ailing Red man and his squaw, was revealed. Both suffering from a severe attack of influenza, the couple were taken to Timmins for treatment.

It was the kindly Rev. Canon George Preyer of Sudbury, famous Anglican missionary to the Indians, who directed the search for a suitable hospital for the Indian couple.

For these reasons it is definitely rich in mineral and vitamin content.

Federal Taxation

Increased Taxation Brings In Large Sum Of Money

Since the introduction of the increased tax on tea has brought in \$5,181,000 to the Dominion treasury.

A return tabled in the House of Commons on a sum of money arising from the increased taxation on tea as a result of increased taxation on tea, the return gave the following:

Increase in newspaper postage, \$952,251; one per cent. tax on net premiums received by insurance companies, \$1,000,000; stamp duty on bonds, \$1,000,000; postage on telegrams, \$4,874,135; postage on telephones, \$2,200,000; postage on canoes, \$1,083,195; canned vegetables, \$293,342; hops, \$362,193; seeds, \$378,189; cheques, \$906,405; telegrams, \$2,737,810; railway sleepers, \$1,129,017.

Telephone Call From Liner Covered Distance Of 17,887 Miles

Following the detection of an error which had existed in the design of Scottish bank notes for many years, numerous of them were sent to the Bank of Scotland.

Sir William Wallace, the British captain who took a British eleven to the United States and Canada 18 months ago, holds the world's record for long distance telephone. Sir Julian's record, said wireless telephone operators of the British Pacific liner Empress of Britain when the world cruise ship arrived at Hong Kong recently, was made two weeks before when the ship was at Singapore, Straits Settlements.

Agitators prevented the reception of a call from the Empress of Britain to Nottingham, England, by the London receiving terminal. But the call was successfully completed by making it direct from the ship to the French liner overland from New York, and by beam wireless to England.

At the time Sir Julian talked he was seven hours ahead of London time. The San Francisco communication station was in the middle of London and New York, of course, three hours ahead of the Pacific station. Rough computation shows a distance of 17,887 miles for the conversation between the Empress of Britain and Nottingham, or 9,276 miles if there was a direct connection between the ship and San Francisco. Direct, the voice would have travelled only 7,950 miles.

Records Made Years Ago

Carry Voice Of Jenny Lind But Paid During Year

Amounts paid by the Dominion government for penance during the last fiscal year, according to an answer tabled in the House of Commons by Secretary of State C. Compton.

Old age pensions, \$12,313,564; soldiers' pensions, \$41,830,820; civilian pensions, \$3,612,932; judges' pensions, \$76,930, and "all other" pensions, \$273,322.

The reply was made in answer to H. E. Spencer (U.P.A., Battle River).

A Native Of Asia

The parsnip that is used here is a native of Asia and Europe.

What we have called Wild Parsnips in Canada, but they are poisonous. The parsnip differs from carrots and parsnips in vegetables in that it is a root vegetable, and improved varieties bring in the ground all winter in the soil in which it grows. The winter's frost seems to give it relish. But it will not keep long after being dug. It is a splendid vegetable for fattening and curing, and it is a good food and a superior flavour. The last half of March and the first ten days of April are the best for spring parsnips.

Carrots For Growing

During the year 1854 the United States purchased on loan from the Irish Free State. This is solemnly recorded in the shipment returns as "Cork to New York—on goat."

Earth Like Rainbow Found On Hillside In Natal

A "rainbow hill" the soil of which is composed of six bright colors, has been found at Ladysmith, Natal.

Farmers who want to paint their fields with colors can do so by mixing the soil with water or oil. They can choose from red, pink, cream, green, brown and yellow. Almost every stone in the vicinity is dyed blood-red and looks as if it had been coated with red oil paint.

Out-Doing Jules Verne

English Winter Forges Passenger Rocket Daring 14,000 M.P.H.

Jules Verne, who thrilled a former generation by flights of fancy into the future, and even H. G. Wells, with his tales of the planets, are outdone by Charles E. Philip in a book about the "Astronautics and Rocket Flight," just published.

He prophesies as of "not far distant date" passenger rocket airplanes capable of doing 14,000 miles per hour and of crossing the Atlantic eventually, in even faster planes, in

Passengers, it appears, will be reasonably comfortable. They will lie down hermetically sealed in hammocks. Special measures are taken to protect them with a screen, for the machine is out of sight of the ground in 30 seconds and passenger's bodies become heavier than lead.

When the rocket plane approaches its destination, retarding rockets assist its heading dive. Mr. Philip's description of the flight makes one take a ticket—for one's most detected neighbor.

Mr. Philip tells us that plans of the first passenger carrying rocket yet devised have been acquired by the German War Ministry. A 24-foot rocket, built with a 100-hp. motor, carried a passenger six miles into the air, two years ago, and landed him safely after 10 minutes.

Others wonder predicted by Mr. Philip is an artillery shell, with a 500-hp. motor, a radio, a searchlight, a radio and a bomb plane, cruising 30 miles above the earth and swooping towards their targets at 3,000 miles per hour.

Long Distance Record

Telephone Call From Liner Covered Distance Of 17,887 Miles

Sir William Wallace, the British captain who took a British eleven to the United States and Canada 18 months ago, holds the world's record for long distance telephone. Sir Julian's record, said wireless telephone operators of the British Pacific liner Empress of Britain when the world cruise ship arrived at Hong Kong recently, was made two weeks before when the ship was at Singapore, Straits Settlements.

Agitators prevented the reception of a call from the Empress of Britain to Nottingham, England, by the London receiving terminal. But the call was successfully completed by making it direct from the ship to the French liner overland from New York, and by beam wireless to England.

At the time Sir Julian talked he was seven hours ahead of London time. The San Francisco communication station was in the middle of London and New York, of course, three hours ahead of the Pacific station. Rough computation shows a distance of 17,887 miles for the conversation between the Empress of Britain and Nottingham, or 9,276 miles if there was a direct connection between the ship and San Francisco. Direct, the voice would have travelled only 7,950 miles.

Records Made Years Ago

Carry Voice Of Jenny Lind But Paid During Year

Somewhere in Sweden or Denmark the "voice" of Jenny Lind, the Swedish nightingale is believed to lie forgotten. Possibly it is in an attic or a storehouse. The famous singer has been recorded, made records, and has been offered for sale. A photograph was put on the market.

The records were of the old cylinder type. After Jenny Lind's death, it is believed, they were sent either to Stockholm or Copenhagen. A Swedish singer is to be asked to search their attics, old trunks and boxes in case they may possess the precious records without knowing it.

Soul Of Colors

Earth Like Rainbow Found On Hillside In Natal

A "rainbow hill" the soil of which is composed of six bright colors, has been found at Ladysmith, Natal.

Delving Into The Past To Piece Together The Story Of The Lost People Of England

Little by little, the patient toil of the archaeologist is piecing together the strange story of the lost peoples of England. How they lived and worked; their dwellings; the gods they worshipped in those far off days when Rome was young—slowly, those things are again emerging into the light.

Yet it is a story with many missing chapters still. Here and there, hard by some mysterious mound or earthworks, excavations reveal concrete evidence of ancient art, that prove and disprove theories recorded history. But who the peoples were, how and why they disappeared, no man can say with any certainty.

Almost half-way in the train journey between Plymouth and London, the Canadian visitor will note little evidence of what may have been the irregular lines of old earthworks. Round the hills they run, interconnecting in obvious design. Occasionally, earthworks rise above plain and rising ground. Stone circles, barrows, and other remains are part of a great system, linked by green roads which traversed England from sea to sea long before Britain bears the tramp of Roman legions or the first Celts crossed the narrow sea from Gaul.

Who were these people and why were these great earthworks needed? The usual explanation is that they were built for defence. But defence against whom? The earthworks at Maiden Castle in Dorset cover five miles. What peoples in those far off days could have needed such elaborate fortifications? What peoples were so numerous as to hope to carry off that much wheat?

Dr. R. E. M. Wheeler, who has been conducting excavations at Maiden Castle for the British Museum, defence there imply a large population. In one pit, more than 4,000 sling stones were found. There were long weights cut from chalk, innumerable bone arrowheads, even a piece of carbonized wheat bread.

Who were these people who came and left this history?

Archaeology has many theories but so far no concrete fact.

They are the lost peoples of England.

Depends Largely On Health

No Hard And Fast Rule For Reaching Century Mark

These centenarians get more confusing every day.

A woman in Mitchell, Ontario, who is 101 rises at half past four every morning and attributes her long life to strict abstinence.

No doubt she goes to bed early and has her eight hours, but what's the use of living to 101 if one goes to bed early in the evening and gets up in the middle of the night?

Another centenarian will say that the secret of long life is to eat the best up early.

One will say that long life is only attained by total abstinence and no smoking. Yet there are plenty centenarians who will claim that a single cigarette a day is the ticket to keep them in perfect health.

So there can be no hard and fast rule for reaching the 100th year. What suits one person does not suit another. If total abstinence from alcohol and tobacco are the secrets, then there are thousands of people in Ontario who ought to live to 100 but won't.

Largely it depends primarily on a sound constitution, moderation in eating and drinking, plenty of fresh air and exercise—and freedom from organic ailments and worry.—St. Thomas Times-Journal.

New Signaling System

A new signaling system, with photo-electric "eye" apparatus and lookout electric for signal boxes, is being installed on the 1,000 miles of the Canadian main-line railways. Trains miles away will be made visible on the screens in thick fog or darkness. And signmen will be able to "look in" at approaching traffic. All four main groups may be converted to the new system in three years.

Newspapers Widely Read

Have No Cause To Be Afraid Of Radio

We are going to be a little afraid of the radio. We are a nation with a cause or an axe goes on the air modestly claims 20,000,000 listeners and upwards. The odd thing is that few rise to question his figure. Are there not 18,000,000 homes with radios? The average household has 4.1 persons per family. Doesn't this make something like 75,000,000 listeners hanging on the orator's every word?

But no one really knows how many of the nation's radios are truly used. We know the millions of radios that are not alit: the dial turned to the dance music programs, the comedians, the face cream, the shaving soaps, the folksongs, the cigs, the news, the weather. No doubt when you have made all deductions, like an income-tax statement, there will still be an impressive remainder. A national figure over the radio may address perhaps five million listeners. But his speech on the front page of the papers next day will have 35,000,000 readers—New York Times.

GARDENING

Gordon L. Smith

Shapes And Sizes

Annual flowers are classified under various heads in the seed catalogues. Attention must be paid, of course, to time of blooming and color. Height should also be noted, as a medium sized plant is better than a slender sprout or tall Comet, will be "born the bluest flower".

But these are only general rules. Every gardener of a few years experience notes automatically the various shapes and sizes of flowers. Certain shades blend well together and often a whole bed will mind. Of course for this sort of thing, all the plants must bloom together.

Frangipani should be taken into account as there are some spicy things like the Star of Bethlehem, Nicotiana, Mimulus, Sweet Sultan and Verbena, while which rather plain as plants, the whole garden with a delightful look more attractive.

The evening, in shaded quarters, tuberoses, Begonias, Pansies and flowers like that.

For one thing, Germany is very vulnerable from the air, and aircraft will play a major part in the next conflict."

First Tramp—What would you do if you won the Irish Sweep?

Second Tramp—I should have all park seats upholstered.

"Fancy having to wait for his wife to come home to get some money!" — Schus in Everybody's Weekly, London.

See No Real Danger

British Editor Finds Strong Anti-War Feeling Everywhere

"There is no real danger of a European war for at least eight or nine years—and, if we have not found one by then, we may not have by that time, we will deserve one."

Thus Vernon Hartlett, Foreign Editor of the London News Chronicle, editor of the magazine *World*, and late chief commentator for the British Broadcasting Corporation, informed the present staff of affairs in Europe, when he addressed a large audience in Convocation Hall, Toronto.

"Everywhere I go I find a strong anti-war feeling," declared Mr. Hartlett. "There has been a marked change in the attitude of the public, especially of the young, in favour of peace and security."

Adolph Hitler himself did not want war.

Germany knows that she has far fewer friends to-day than she possessed in 1914," he continued. "I do not believe that any nation in Europe has any desire to go to war."

It will be seen that the engine is very efficient, as the builders of the engine believe it will develop such colossal power that it may blow itself up.

The inventors have disclosed that the engine must be a gasoline turbine and not a steam engine, as the result of a series of countless unsuccessful experiments during the past 30 years.

Experts who examined the plans declare that if the engine proves only 10 per cent efficient it will develop as much power as a similar sized gasoline engine and will cost considerably less to build.

THE FESTIVAL OF EASTER

Easter, the festival of Christ's resurrection from the dead, is one of the most solemnly observed of all the holy feasts of the year. The name Easter is derived from the old English word *Eastre*, which may have their roots in the oriental Ester, goddess of the spring. The French designation, *pâques*, preserves a reference to the Jewish *pashcha*, or *passover*.

The early Christians were divided in opinion as to the proper date for the celebration of Easter, which at one time designated both the resurrection and the coming of Spring. So, in the year 325, the Council of Nicaea in 325 A.D. decreed uniformity in the date, and set the Sunday immediately following the fourteenth day of the so-called Pascual Moon which happens on or after the vernal equinox, which invariably falls on March 22nd. Easter, however, cannot occur earlier than March 22nd or later than April 25th.

The real significance of Easter lies in the hope of the resurrection. Even as the miracle of resurrection is enacted before our eyes, the triumph of life over death. The trees which have been leafless and without signs of life all winter, will now burst forth decked with new and beautiful leafage and flowers, and will renew a green and living life once again. Spring comes to the earth in many and varied forms of life, beauty and pleasure, etc., to delight the eye and nourish the body, and to worth the glory of the Creator.

Nature speaks her message to those who have ears to hear and eyes to see. The risen Christ gives us hope of resurrection, and we believe, despite the doubt that may frequently assaile us, that "because He liveth, we shall also have life."

THE BIGGEST JOB IN ALBERTA

After a hard winter the farmers in Alberta have a big job ahead of them, which is to clear out the land to small grains.

What a struggle it really is close to the \$4,000,000 figure, the rest being meat, barley, rye and flax.

An idea may be gained of the area by comparing it with the following figures: the area containing 1½ million acres. This runs from Barons to the Rockies, and its width lies largely between the Red Deer and the Bow river.

The acreage Alberta farmers plant to small grain every spring is more than eight times the area of this irrigation block.

There are only about 800,000 farms in the grain growing belt, so the extent in the irrigation. So they can't work any eight-hour day to complete their grain task every springtime.

The latest date for planting wheat is around May 29, and that in the most favored portions of the province. In the central and northern areas wheat must be sown in Mother Earth long before that date.

Planting grain is the first task for the fastest farmers, when ready for the binder. That is the reason why there are a few extra days. Some wheats take 110 to 112 days to ripen. Frosts occur in some sections early in August so it's a hurry to get the grain matured and out.

The economy of the province is based largely—about 75 per cent—on agriculture. The growing of grain is far and away the most important of our crops, and so is the case. So this job of sowing the Alberta crop is of vital importance.

So we wish good luck to the farmers this spring and may their labors be amply rewarded.

THE MENACE OF SOIL DRIFTING

If Alberta farmers don't start in to control soil drifting in earnest in a few years, they will have farms worth owning. That may look like an alarmist warning, and there is every indication that it is accurate; soil drifting is the big agricultural problem facing Alberta today.

Of course it may be troublesome this spring. The likelihood is that it will not. But other springs are coming and winds, too.

For years the great wheat belt of Saskatchewan centering on Regina and the Bow River, was agricultural eldorado. It actually produced more gold than any gold mine in Canada ever turned out.

What is that area today?

A wasted and despoiled country with roadside filled with invaluable topsoil, peopled by apprehensive and discouraged farmers and people. It has received a blow from which it will take years to recover because soil drifting was never dealt with intelligently.

The prairie west is all subjected to soil drifting and each passing year sees the soil condition becoming more susceptible to that menace.

Then a series of dust storms take away one inch of top soil and a acre of good Alberta farmland it carries off 300 pounds of phosphorus, 1500 pounds of nitrogen and 15 tons of organic matter.

Two hundred dollars' worth of commercial fertilizer won't restore the loss of plant food. Twenty wheat crops each of 50 bushels would not use up the phosphorus carried off that acre.

That's losing real money and losing it fast. It's a serious thing whether people realize it or not.

There are means of controlling soil drift and every farmer should know and practice them. Professor Wyatt, of the University of Alberta, outlined the most practical methods as follows:

(1) Regulate time of plowing so that the soil is moist when plowed.

(2) Leave the surface rough; beware implements which pulverize the surface soil.

(3) Control weeds on summerfallow by using such implements as the rod weeder, duckfoot cultivators, etc., which do not disturb and pulverize surface soil.

(4) At critical time keep surface soil ridged at right angles to prevailing wind by using lister, plow; even springtooth harrow may do, provided the surface soil is moist.

(5) Spread manure on the spots most likely to start blowing.

(6) Alternate strips of crop and fallow.

(7) Use sunnhemp, fallow substitutes such as corn, sunflowers, sweet clover.

(8) Use systematic rotations, including a certain amount of grass crops, and keep some livestock, thus maintaining the fibre in your soil.

(9) Include a fall cereal such as rye in your rotation.

(10) Do not have too large areas of fallow in one field or in adjacent fields.

(11) Plant more trees for windbreaks.

CHANCELLOR

CHANCELLOR, April 14.—Mr. and Mrs. G. C. Phillips, accompanied by Mr. and Mrs. G. C. Clancy, spent Thursday in Calgary.

J. M. Westley attended the Municipal Conference in Gleichen on Tuesday.

A Social Credit meeting was held on Thursday night in G. C. Phillips' store, with a large crowd present. Harry Hegi, who had acted as the Chancellor delegate, gave an interesting report on the Calgary Social Credit Convention which he had attended.

Mr. and Mrs. J. Bowden and family have moved over to the half farm land. Dickie is spending a day in the Chancellor district.

5,000 FACTS ABOUT CANADA FOR 1915

The public will again welcome the annual issue of *5,000 Facts About Canada*, now in its 32nd year, compiled by the well known Canadian writer and lecturer, Frank J. G. Clark, who has a wide desireability for the consciousness value of its information. It is a valuable encyclopaedia of the Dominion in a Nutshell, "or two," they say. Here within its pages are all the salient facts concerning the Dominion, its history, its natural resources, its agriculture, industry, commerce, and a record of recent months. It is Canada's most effective and its wide circulation is good evidence of its popularity.

With a poultry producer having to work hard to market with a profit, and on arrival, to find them inferior to the market value, the poultry producer will be wondering where the **POULTRY PROTECTIVE ASSOCIATION** are hiding themselves at.

Mr. Tom Muller was present at the Calgary last week.

A birthday party was held at Mr. A. V. O. Brown's home last week.

Some of the bridge enthusiasts in Gleichen and Makewane in the vicinity of the bridge were present at the annual meeting last week, with one of the sharks, Mr. G. C. Phillips.

The Social Credit meeting on Saturday was postponed Saturday by a howling blizzard. There will be a meeting on Saturday, April 26, in the schoolhouse with Mr. A. C. Phillips as speaker.

There will be a dance in Makewane on April 18 with the usual rate of admission, ladies being lunch, good music, come out and have a good time!

A Postwick is having an auction sale in the near future and leaving the district. We wish them every success.

MAKEPEACE

MAKEPEACE, April 16.—The

dance in Makepeace on April 16th was a big success, attended by a large crowd from Makepeace, Hussar and Wintering Hills. The Wintering Hills Orchestra furnished the music, and everyone enjoyed the glee time. The Social Credit meeting on Saturday, April 16th, was most of the sponsors of this dance, also the lunch committee.

C. Merriman and Mr. and Mrs. O. McCurdy were visitors in Makepeace on April 16th. They were the weekend guests of Mr. and Mrs. G. C. Phillips.

Mr. and Mrs. J. Bowden and family have moved over to the half farm land. Dickie is spending a day in the Chancellor district.

A Social Credit meeting was held on Saturday night in G. C. Phillips' store, with a large crowd present.

OTTAWA LETTER (continued)

hour day, all for industrial workers. A Grain Board will be set up and the Minister said loans would be given more freely by the Farm Loan Board. If we are to have a definite National Policy and, if first things are to come first, then the first labor dividends should be paid to the men and women who are disabled, who are unfortunate in the depression and who have reached a certain age if they will retire from work and thus make room for younger people. There are good reasons for this, the most important being that it is by taxing pools of wealth, and by it we can obtain freedom, personal initiative, liberty and proceed to more equality in opportunity and equal distribution of wealth in this age of plenty.

The Poker Song: Waiting for chips that never come in.

ROSEMARY

ROSEMARY, April 18. - Billy Hart, son of Captain Bill Caldwell and Bill George of Glenmore, were in the County on Friday.

Bill Webdale returned home last week and then left again for Nanton. Chas. Morgan motored down from Calgary last Saturday to spend the summer with Mr. and Mrs. Andrech. Roy Norton returned home Saturday evening after visiting with relatives in Edson, Parkland.

Miss Ruby Beckhoff, Freda and Charlie of Rosemary, and Abe Rufen and Stuart Alonso of Casella spent Saturday evening at the MacLeod home.

Mr. and Mrs. Arundel of Imperial visited Mr. and Mrs. Jesse Adams on Sunday of last week.

Abbie Dickson, who has been in Fink, Saskatchewan, for the last two years, is visiting with friends here.

Roy Graham and Henry Kneipper motored to Calgary last week.

The local boys organized a junior baseball team last Wednesday and are putting on a dance April 26 to raise funds. Everybody come and help the boys out.

Albert Hall, former Atlas Lambie agent here, visited with friends here last week.

Roland Eastman made a trip to Coopers on Friday.

CROWFOOT

CROWFOOT, April 18. - Talk about your combinations, we've got them all beat: a blizzard one day, sunshine the next, and the following day

The Misses Gladys and Alice Farnay and Marie Chisholm, visitors at the home of Mr. and Mrs. Chas. Rodbourne,

Jas. Culbertson was a business caller at the Goudie home near Bassano last Monday.

The Misses Boren and Irene Chapman were the week end visitors at Miss Doris Holton.

If you think we've got good roads, ask Joe Robarge or Archie Bottwick who both had the misfortune to strip gears or burn out the clutch on their cars between Campbell's and the village. The Hallman also reports tremendous difficulties. Let's all work together and get this road fixed up to Makepeace.

In days of yore, if anybody missed a stage-coach, he was content to wait two or three days for the next to come.

Now he lets out a squawk if he misses one section of a revolving door.

Leonore Park and Nora Fessy attended the Music Festival in Bassano last Friday.

A NEW DEVELOPMENT IN LIGHTING SYSTEMS

The present system of lighting with bulbs, wall brackets and hanging centre fixtures is a now old-fashioned ed.

At least, this is the claim of A. F. Chapman, prominent English engineer, whose newest lighting development has been installed in many of England's finest hotels, department stores and homes.

A revolutionary development, growing from one to four feet in length, glowing with an even, shadowless light, replaces the bulbs that we at the present time have been standard equipment in homes all over the world.

"The tube system of lighting came from experiments which I was making with Neon lighting," Mr. Chapman said to an interview. "In the first instance I had not planned to use electricity, feeling that the effect desired could be achieved with Nature. But as I experimented I found it an impossibility to control a certain flicker. It was then that I turned to electricity."

Months of experimenting followed until finally Mr. Chapman was able to announce that he had perfected his invention. It meant that he had invented a tube to banish the dark corners from the home and in evolving a lighting system that gave adequate light no matter where the occupant was.

DUCHESS

DUCHESS, April 18. - A special meeting of the Bassano Credit Union Group will be held in the Church on Saturday, April 26 at 8 p.m. Mr. Muller of Hussar will be the speaker. Everybody welcome.

Rev. F. T. Haggard held a Boy Scout meeting here on Monday.

Mr. and Mrs. John Kink, of Jenner, who have been visiting in Medicine Hat, stopped at the home of Mr. and Mrs. Root for a short stay enroute to their home.

Seven cards of Duchesses attended the old time dance in Brooks sponsored by the Girl Guides. An enjoyable time was had by all who were present.

Mr. and Mrs. Brown are spending the weekend in Calgary.

About 20 from Duchesses attended the Social Credit meeting at Brooks where Mr. Weimert of Calgary was speaking.

Mr. J. Brown and Mrs. Dunaway spent Sunday with the Lindquist family.

Mr. and Mrs. Bill Smith returned from Kansas on Tuesday, bringing with them Mr. and Mrs. Neitz and son who will settle here.

Mr. Roland Sudgen returned on Thursday from Kansas and Nebraska where he has been visiting friends.

Mr. John Hanson returned from Kansas where he has been visiting friends and relatives.

Sweet Young Thing: Did my father order some coal this morning?
Coalmans: This load is for Mr. Zell.
S.Y.T.: That's nice. I'm Gladys Zell.
Coalmans: So am I.

What's all the figuring about?

It's about gasoline.

Experts have figured out specifications for gasoline for use under the most exacting driving conditions to which motor vehicles can be subjected.

What of it? Just this:

Texaco Fire-Chief beats those specifications on every count.

A fact . . . not a claim.

$Y = 1.36$
